

# Building modern conversations in Office365 with add-ins and actionable messages

Arun Varadharajan

Kallu Sushma

Anjana Valsan

# Agenda

## Platform Overview

M365 platform

Outlook platform

## Microsoft Graph

Outlook capabilities

What is coming

## Add-ins & Actionable messages

Demo - New capabilities

What is coming

Best practices

Microsoft 365 Platform

## Office Apps

Create & co-author documents

## SharePoint

Intranets & content management

## Outlook

Email & calendar

## Teams

Hub for teamwork

## OneDrive

All your files, anywhere

## Yammer

Connect across the organization

## Azure AD & Office 365 Groups

Identity & Membership

## Microsoft Graph

Search & Intelligence

## Office 365 Trust

Security & Compliance

# Microsoft 365 Platform

Extend Microsoft 365 experiences

Documents

Conversations

Pages

Timeline

Build your experience

web, device,  
and service apps

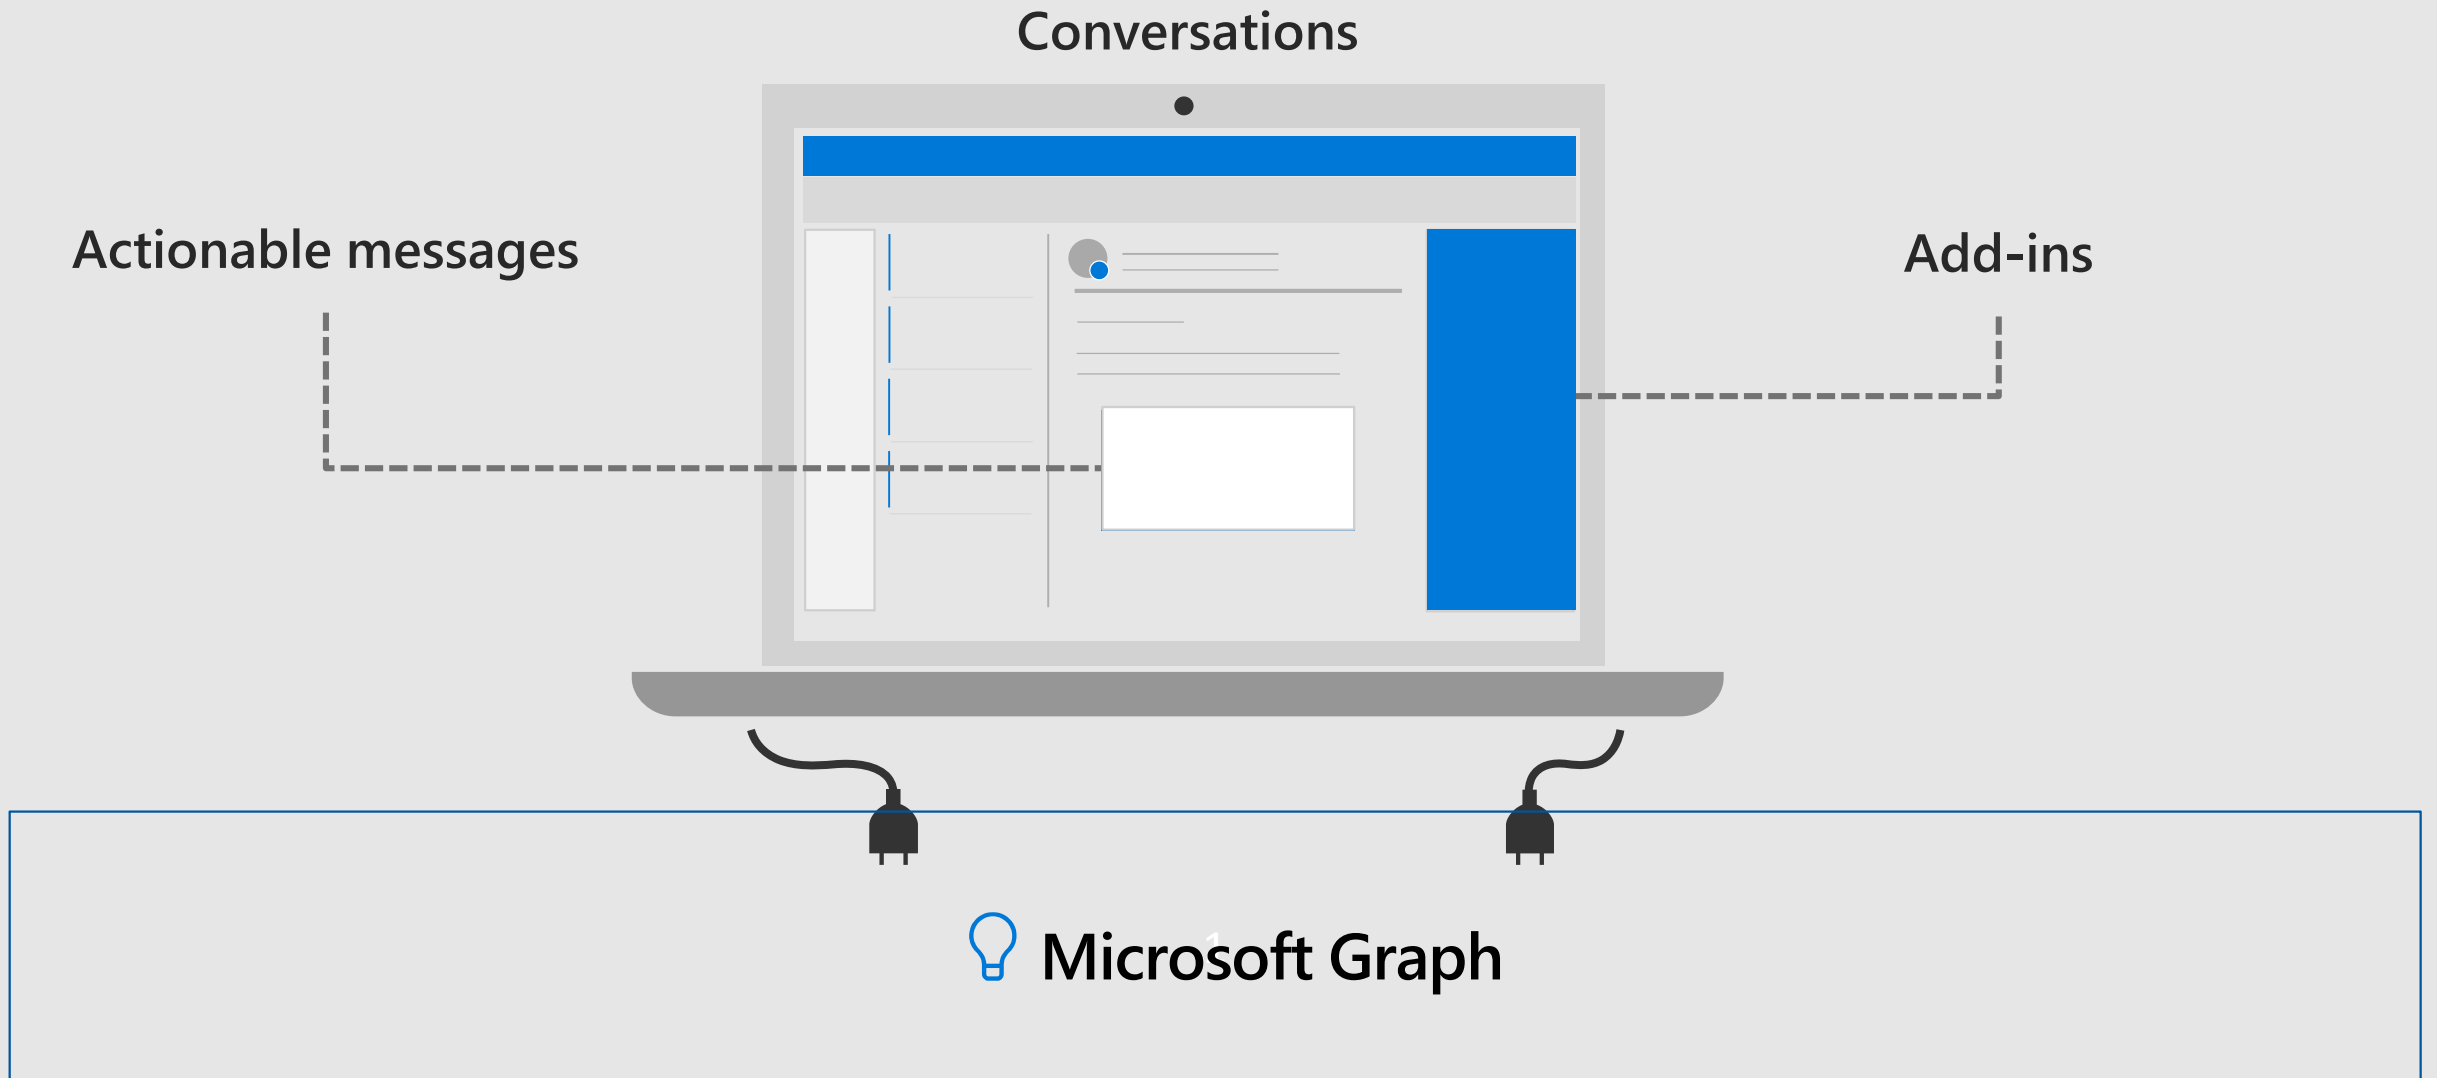

iOS/Android/Windows/Web

Microsoft Graph

# Outlook extensions

# Join the Outlook Platform

## Reach

**100M** Office 365  
Enterprise users/mo.

**500M** Outlook.com  
users

## Maturity

**350+** Add-Ins

**100+** Connectors

**2.5M+** Actionable  
emails

## Availability

### Desktop

Windows  
Mac

### Web

### Mobile

iOS  
Android

Add-ins

# OFFICE ADD-INS

- Integrations built by third parties into Office products

## ADVANTAGES OF WEB ADD-INS

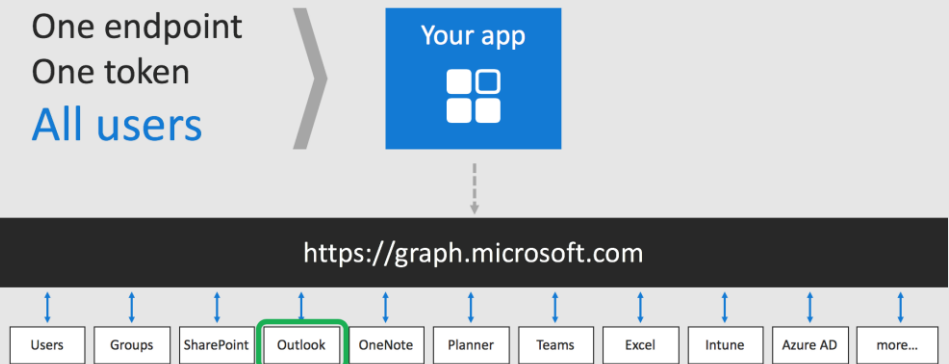

- Does not install code physically onto a user's device

- One code  $\longrightarrow$  all platforms
- Centralized deployment and distribution
- Submit on App Source, find your app on all platforms!

## WHY YOU SHOULD USE OFFICE PLATFORM

- Add new functionality to office clients
- Create new rich interactive objects
- Microsoft Graph API to connect to data that drives productivity

5M

MAU (Monthly  
Active Users)

1200+

Apps  
available

800

Partners  
onboarded

# COMPONENTS OF ADD-IN

## Manifest

Specifies settings and capabilities of the Add-in such as:

- Permission levels
- Data access levels
- How it integrates with Outlook

## Web App

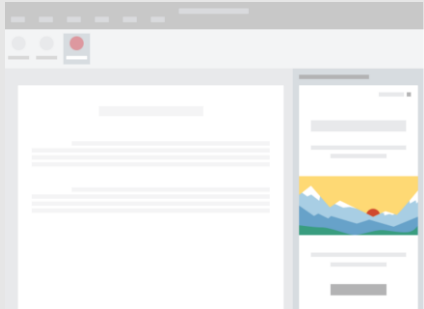

HTML + JS files hosted on a server or hosting service

- Specifies Add in UI and behavior
- Uses Office JS API to interact with office clients

# EXTENSION POINTS

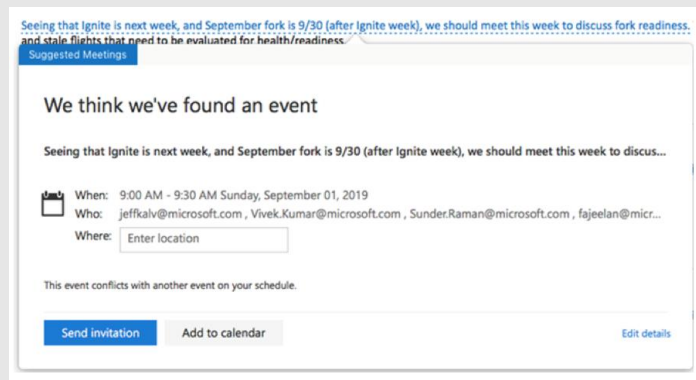

## Extend office functionality

### 1) Custom Buttons

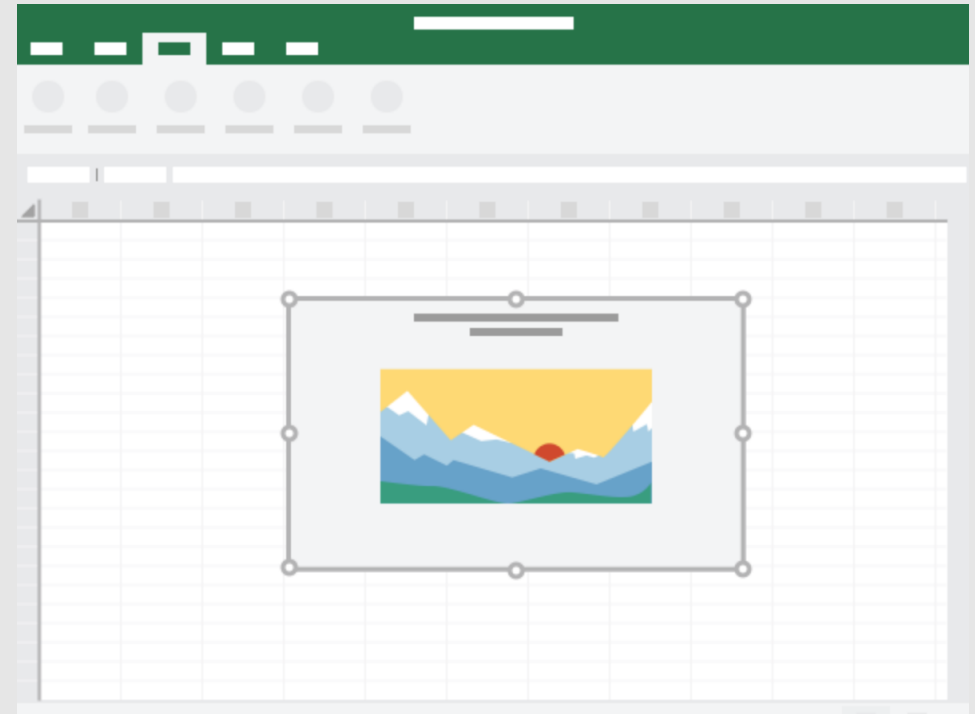

### 2) Task Pane

### 3) Contextual Add-ins

## Create new objects

Content Add-ins that integrate rich web-based data visualizations or media into Excel or Power Point

# Demo – Create new Outlook addin

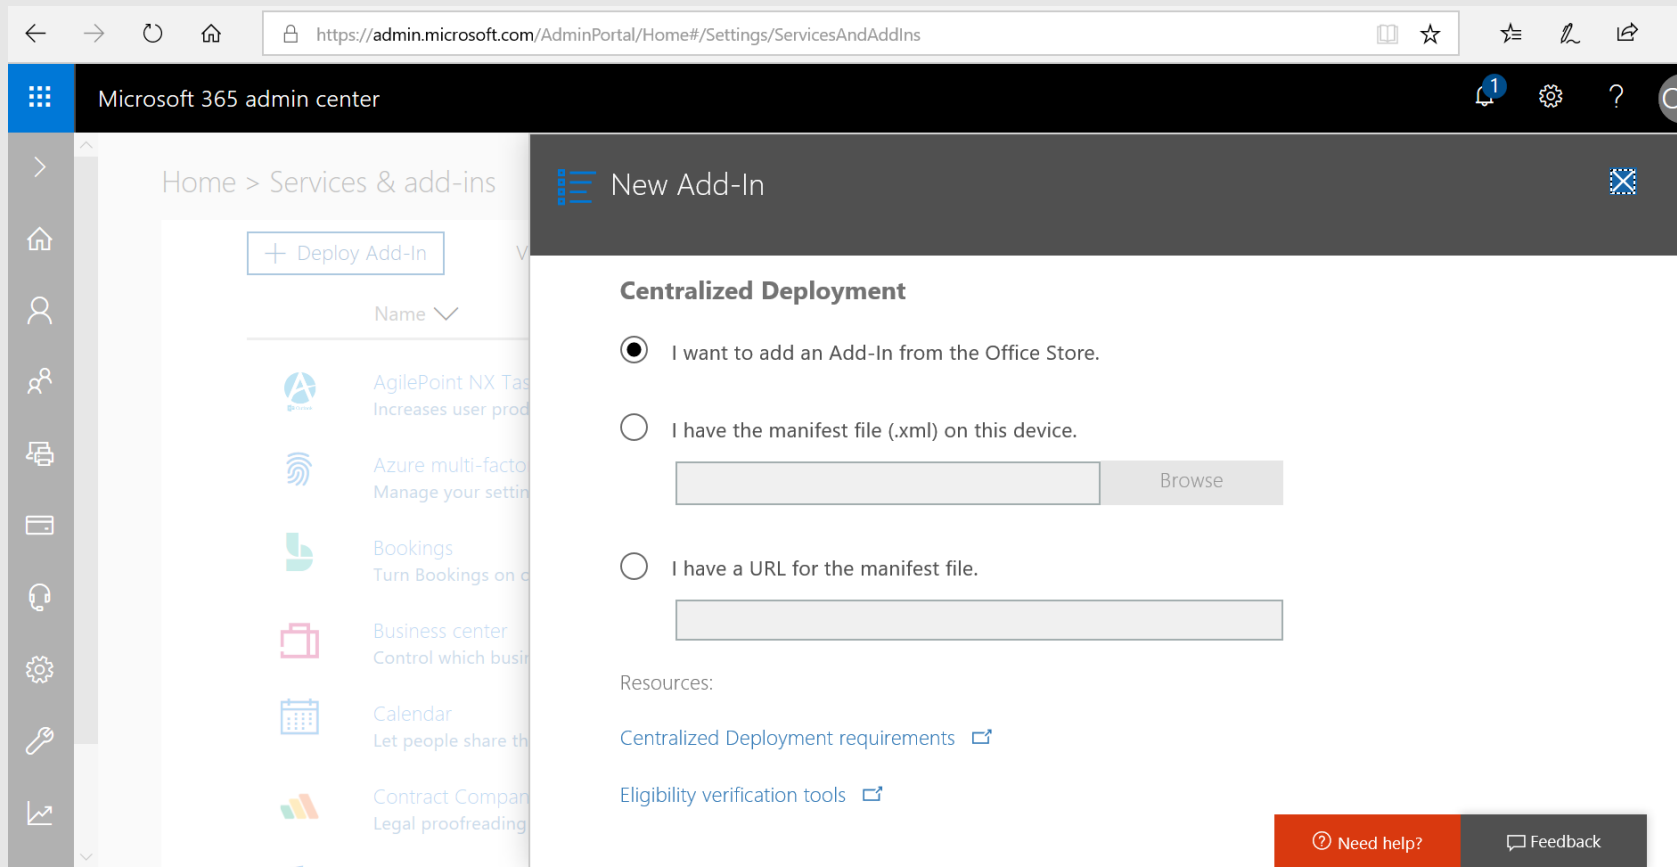

- Install [Node.js](#)
- Install latest version of [Yeoman](#) and the [Yeoman generator for Office Add-ins](#) using command "npm install -g yo generator-office"
- Create folder "MyOutlookAddin" and navigate to that folder
- Create Outlook addin project by running "yo office" and choosing following values
  - Choose a project type - Office Add-in project using JQuery framework
  - Choose a script type - Javascript
  - What do you want to name your add-in? - My Office Add-in
  - Which Office client application would you like to support? - Outlook
- Navigate to "My Office Add-in" folder and update index.html, src/index.js, app.css and manifest.xml file as required.
- "npm start" to start service at . If npm start fails, pls update webpack-cli version: npm install --save-dev [webpack-cli@3.1.2](#) and then try again.
- Sidelaod addin in Outlook client and use it

Refer <https://docs.microsoft.com/en-us/outlook/add-ins/quick-start?tabs=visual-studio-code>

# Add-in Distribution

- Share manifest file with users and ask them side load
- Automatically install add-in for specific users/groups using centralized deployment feature @

<https://admin.microsoft.com/AdminPortal/Home#/Settings/ServicesAndAddIns>

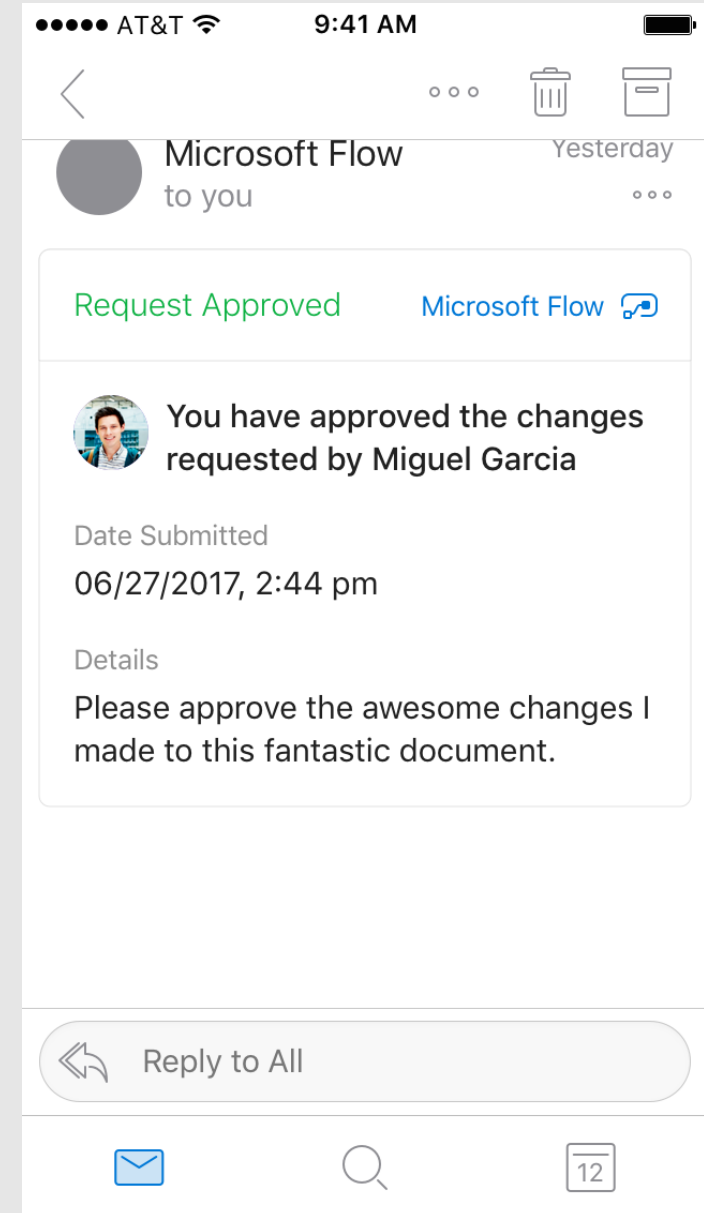

Actionable messages

**Actionable Messages** enable you to take quick actions right from within an email

Users can take actions within an email and get a response instantly right there.

With this platform developers can now embed actions in their emails increasing user engagement with their services, as well as enhancing the user's productivity.

# Demo

Actionable Message

## Scenario Archetypes

Here are a few scenarios that actionable messages can be used for.

- Expense/Invoice Expense Approvals, Invoice Payments, Review Details, Reject with comments
  - Zoho
  - MS Approvals
- Workflows Vacation approvals, Membership requests, Access approvals, Assign, Re-assign
  - Kronos
- Polls/Surveys Vote, Leave feedback, Rate, Comment, Choose from a list, View dynamic poll results
  - Survey Monkey
  - ServiceNow
